

Homework 9: Linear Transformations

1. Show that each of the following transformations $T : \mathbb{R}^2 \rightarrow \mathbb{R}^2$ is linear by finding a matrix A such that $T(\mathbf{x}) = A\mathbf{x}$. Describe geometrically what each transformation does.

(a) $T\left(\begin{bmatrix} x_1 \\ x_2 \end{bmatrix}\right) = \begin{bmatrix} -x_1 \\ x_2 \end{bmatrix}$

(b) $T\left(\begin{bmatrix} x_1 \\ x_2 \end{bmatrix}\right) = \begin{bmatrix} x_2 \\ x_1 \end{bmatrix}$

(c) $T\left(\begin{bmatrix} x_1 \\ x_2 \end{bmatrix}\right) = \begin{bmatrix} 0 \\ x_2 \end{bmatrix}$

(d) $T(\mathbf{x}) = -\mathbf{x}$

(e) $T(\mathbf{x}) = \frac{1}{2}\mathbf{x}$

2. Determine whether each of the following transformations T is linear. Prove your answers.

(a) $T : \mathbb{R}^2 \rightarrow \mathbb{R}^2$ defined by $T\left(\begin{bmatrix} x_1 \\ x_2 \end{bmatrix}\right) = \begin{bmatrix} 4x_1 - 2x_2 \\ 3|x_2| \end{bmatrix}$.

(b) $T : \mathbb{R}^2 \rightarrow \mathbb{R}^3$ defined by $T\left(\begin{bmatrix} x_1 \\ x_2 \end{bmatrix}\right) = \begin{bmatrix} x_1 - 2x_2 \\ x_1 + 3x_2 \\ 3x_1 - 4x_2 \end{bmatrix}$.

(c) $T : P_2 \rightarrow P_2$ defined by $T(a + bx + cx^2) = a + b(x + 1) + b(x + 1)^2$.

3. Let $T : V \rightarrow W$ be a linear transformation, and let $\{\mathbf{v}_1, \mathbf{v}_2, \dots, \mathbf{v}_n\}$ be a set of vectors that spans V . Prove that if

$$T(\mathbf{v}_1) = T(\mathbf{v}_2) = \dots = T(\mathbf{v}_n) = \mathbf{0},$$

then $T(\mathbf{u}) = \mathbf{0}$ for all vectors \mathbf{u} in V .

Hint. Use Theorem 2.1.

4. Let $T : V \rightarrow W$ be a linear transformation. Suppose that $\{\mathbf{v}_1, \dots, \mathbf{v}_p\}$ is a linearly dependent set of vectors in V . Using the definition of linear dependence and Theorem 2.1, prove that $\{T(\mathbf{v}_1), \dots, T(\mathbf{v}_p)\}$ is linearly dependent in W .

Hint. Begin the proof as follows:

“Since $\{\mathbf{v}_1, \dots, \mathbf{v}_p\}$ is linearly dependent, there exist scalars c_1, \dots, c_p which are not all zero for which $c_1\mathbf{v}_1 + \dots + c_p\mathbf{v}_p = \mathbf{0}$.”

5. Let V and W be vector spaces, and define $T : V \rightarrow W$ by $T(\mathbf{v}) = \mathbf{0}$ for every \mathbf{v} in V . Use the definition of linear transformation to prove that T is linear.
