Homework 4: Subspace, Linear Combination, Span

Instructions. All answers to textbook problems should be justified. For problems 5 and 6, you may not use any theorems; you should use only definitions. Assignments should be **stapled** and written clearly and legibly.

1. §4.2, #3(a), #5(a)(b).
2. Give an example of a nonempty subset of $M_{2,2}$ which is not a subspace of $M_{2,2}$.
3. Determine whether the set of all vectors of the form $\begin{bmatrix} a \\ b \\ -2b \\ a \end{bmatrix}$ is a subspace of $\mathbb{R}^4$. Prove your answer.
4. §4.2, #10(b)(c), 12(a)(b), 14(a)(c)(d)(e).
5. Let $\mathbf{u}$, $\mathbf{v}$, $\mathbf{w}$ be vectors in a vector space V. Prove that $\text{span}\{\mathbf{u}, \mathbf{v}\}$ is a subset of $\text{span}\{\mathbf{u}, \mathbf{v}, \mathbf{w}\}$.

   Hint. Begin the proof as follows: "Suppose that $\mathbf{z}$ is in $\text{span}\{\mathbf{u}, \mathbf{v}\}$. I must show that $\mathbf{z}$ is also in $\text{span}\{\mathbf{u}, \mathbf{v}, \mathbf{w}\}$."
6. Let $\mathbf{u}, \mathbf{v}$, $\mathbf{w}$, $\mathbf{x}$, $\mathbf{y}$ be vectors in a vector space V. Suppose that $\mathbf{x}$ and $\mathbf{y}$ are in $\text{span}\{\mathbf{u}, \mathbf{v}, \mathbf{w}\}$ and c is a scalar.
   (a) Prove that $\mathbf{x} + \mathbf{y}$ is in $\text{span}\{\mathbf{u}, \mathbf{v}, \mathbf{w}\}$.
   (b) Prove that $c\mathbf{x}$ is in $\text{span}\{\mathbf{u}, \mathbf{v}, \mathbf{w}\}$.
   (c) What do parts (a) and (b) tell you about $\text{span}\{\mathbf{u}, \mathbf{v}, \mathbf{w}\}$? (You may use a theorem to answer this question.)
