## Homework 9: Continuity

Math 350

- 1. §5.2, #4, 18.
- 2. Suppose that f, g, h are three functions which are defined on (a, b) and continuous at  $c \in (a, b)$ .
  - (a) Prove that if  $f(c) \neq 0$ , then there exists a neighborhood U of c such that  $f(x) \neq 0$  for every  $x \in U$ .
  - (b) Prove that if  $g(c) \neq h(c)$ , then there exists a neighborhood U of c such that  $g(x) \neq h(x)$  for every  $x \in U$ . (Hint: consider the function p(x) = g(x) h(x), and apply part (a)).
- 3. Let D be a subset of  $\mathbb{R}$  containing 0, and let  $f: D \to \mathbb{R}$  be bounded on D (i.e., f(D) is a bounded subset of  $\mathbb{R}$ ). Define a new function  $g: D \to \mathbb{R}$  by g(x) = xf(x).
  - (a) Use the definition of continuity to prove that q is continuous at x = 0.
  - (b) Suppose  $c \neq 0$ . Prove that g is continuous at c if and only if f is continuous at c. (Hint: Use a theorem on continuity.)
